### 4 Conclusion

- Suppletion (Osthoff, 1888, 1899) is the phenomenon where a single lexical item is associated with two phonologically unrelated forms, the choice of form depending on the morphosyntactic context.

(1)

	POS	CMPR	
a. Comparative:	<b>long</b>	<b>long-er</b>	
	<b>good</b>	<b>bett-er</b>	*good-er
b. Past:	<b>walk</b>	<b>walk-ed</b>	
	<b>go</b>	<b>wen-t</b>	*go-ed
c. Plural:	<b>boy</b>	<b>boy-s</b>	
	<b>person</b>	<b>people-Ø</b>	
d. cf. Russian:	<b>lošad'<sup>j</sup></b>	<b>lošad-i</b>	'horse(s)'
	<b>čelovek</b>	<b>l'ud-i</b>	'person/PL'

(2)

		POS	COMP	SPRL	Pattern
a.	English	<b>smart</b>	<b>smart-er</b>	<b>smart-est</b>	AAA
b.	English	<b>good</b>	<b>bett-er</b>	<b>be-st</b>	ABB
c.	Estonian	<b>hea</b>	<b>pare-m</b>	<b>par-im</b>	ABB
d.	Latin	<b>bon-us</b>	<b>mel-ior</b>	<b>opt-imus</b>	ABC
e.	Welsh	<b>da</b>	<b>gwell</b>	<b>gor-au</b>	ABC

- AAA: the positive, comparative and superlative all share the same base.
- ABB: the comparative and superlative share a suppletive base distinct from the positive.
- ABC: the comparative and superlative are both suppletive with respect to the positive and with respect to each other.

## Introduction

### Adjectives

Theoretical  
Background

## Pronouns: Case

Attested Patterns

AAB

Locality, Adjacency

## Pronouns: Number

Number in nouns

Structure, Nouns,  
Pronouns

## Conclusion

Bibliography

- Strikingly, there are no clear ABA or AAB instances (see Bobaljik 2012 for qualifications).
  - ABA would hypothetically be *good – better – goodest*.
  - AAB would be *good – gooder – best*.
- Both ABA and AAB patterns are *a priori* conceivable, but the fact that they are never attested suggests that the grammar simply is unable to generate them.

- We assume Distributed Morphology (DM) (Halle & Marantz, 1993).
- Suppletion in DM is treated as contextual allomorphy regulated by the Elsewhere Condition.

### (3) Elsewhere Condition (after Kiparsky 1973)

If two or more (incompatible) rules  $R_1$ ,  $R_2$  may apply to a given structure, then the more specific rule takes precedence over the more general.

- Crucial to understanding the attested patterns of suppletion in adjectives is the Containment Hypothesis.

#### (4) The Containment Hypothesis

The representation of the superlative properly contains that of the comparative.

#### (5) Obligatory

#### (6) Not possible

- The containment hypothesis is supported in morphology.

(7)

	CMPR	SPRL
a. Persian:	X-tær	X-tær-in
b. Lithuanian:	X-iau	X-iaus-ia
c. Cimbr. German:	X-ar	X-ar-ste
d. Batsbi:	X-vx	X-vx-č
e. Latvian:	X-âk	vis-X-âk
f. Czech:	X-ši	nej-X-ši
g. Hungarian:	X-bb	leg-X-bb
h. Chukchi:	X-əŋ	ənan-X-əŋ
i. Cherokee:	X-ka/ya/...	w-X-kǎʔi/yǎʔi/...
j. Ubykh:	ç'a-X	a-ç'a-X
k. Latin:	X-ior < -ios	X-issimus < -is-m.mo-s
l. P-IE:	*X- <sub>̌</sub> ios-, *X-is-	*X-is-to-s

(8)

- (9) a.  $\sqrt{\text{GOOD}}$   $\rightarrow$  be(tt)- / \_\_ ] CMPR  
 b.  $\sqrt{\text{GOOD}}$   $\rightarrow$  good

- The elsewhere condition, coupled with the VI rule in (9a) serve to ensure that whenever the comparative is suppletive, then the superlative is also.
- This explains the absence of ABA patterns.

- Suppletion can be used as a diagnostic of structure.
- The exclusion of ABA is derived through the superlative always properly containing the comparative, combined with the elsewhere principle.
- An additional assumption is needed to exclude AAB.
  - “If there is a context-sensitive rule of exponence involving a node  $\alpha$ , then there is a context-free rule of exponence involving  $\alpha$  (Bobaljik, 2012, 150).”
  - ➡ This additional assumption has the effect that suppletion must happen in the comparative for it to be possible in the superlative.

## (10) The GOOD-BETT-BETT triple:

	POS	CMPR	SPRL
a. English	<b>good</b>	<b>bett-er</b>	<b>be-st</b>
b. German	<b>gut</b>	<b>bess-er</b>	<b>be-st-...</b>
c. Gothic	<b>goþ-s</b>	<b>bat-iz-a</b>	<b>bat-is-t-s</b>
d. Afrikaans	<b>goed</b>	<b>bet-er</b>	<b>be-ste</b>
e. Swedish	<b>god</b>	<b>bätt-re</b>	<b>bä-st</b>
f. Cimbrian	<b>guat</b>	<b>pez-ar</b>	<b>pez-ar-ste</b>

...

Structure, Nouns, Pronouns

## 4 Conclusion

- This project extends the theory of Bobaljik (2012) to account for case and number suppletion patterns in pronouns
- A good candidate to observe these effects is case and number in pronouns.
- Suppletion for case and number is frequently seen in pronouns (c.f. Moskal, to appear).

## (11) Icelandic

	NOM	ACC	DAT	GEN	
1SG	ég	mig	mér	mín	ABBB
2SG	þú	þig	þér	þín	AAAA
1PL	við	okkur	okkur	okkar	ABBB
2PL	þið	ykkur	ykkur	ykkar	ABBB

### (12) Advantages:

- Data generally well described
- Can construct large sample (160 languages)
- Rich source of suppletion

### (13) Disadvantages:

- Segmentation tricky
- 'Genitive' sometimes conflates case and possessive
- Genitive excluded in this survey

- Similar statements can be made about case that can be made about adjectives.

(14) The synthetic superlative generalization:  
“No language has morphological superlatives (X-est), but only periphrastic comparatives (more X ) (Bobaljik, 2012).”

- Caha (2009): There is a universal case sequence, following Blake (1994)

(15) NOM > ACC > DAT > INSTR > COM

(16) Inventory of case suffixes:  
“If a given case in the Case sequence is a suffix, all cases to its left (if present in the language) are also suffixed (Caha, 2009, 30)”

- In superlatives, languages sometimes show the comparative morpheme transparently contained.
- This is also (sporadically) attested in case morphology (Caha, 2009):

## (17) Colloquial Czech (Caha)

	'man'	'chicken'	'eye'
NOM	muž-i	kuřat-a	oč-i
ACC	muž-E	kuřat-A	oč-l
INST	muž-E-ma	kuřat-A-ma	oč-l-ma

- Caucasian: oblique cases built on Ergative
- Complex internal structure of local cases (Radkevich, 2010)

## (18) nir- i- q- in- ri

river ERG ON ALL VERSATIVE

'towards the bank of the river' (Tabasaran)

- Following Caha (2009), we can assume that cases are structured following the case hierarchy.
- We include ergative/absolutive systems also.
- $\underbrace{\text{NOM/ABS}}_{\text{unmarked}} > \underbrace{\text{ACC/ERG}}_{\text{dependent}} > \underbrace{\text{DAT ...}}_{\text{oblique}}$

(19)

- If cases are complex entities, then we should expect that this is reflected in the same suppletion patterns that are seen in comparative/superlative suppletion.
- That is, we make the following predictions:
  - AAA, ABB, ABC are all possible patterns of suppletion.
  - ABA should not be a possible pattern.
  - AAB *potentially* is a possible pattern depending on the type of complexity, as discussed below.

## Introduction

Adjectives

Bibliography

- Nakh-Daghestanian 1sg

(29)	ABS	ERG	DAT
Khinalug	zi	jä	as(ir)
Rutul	zi	za-d	za-s
Tabassaran	izú	izu	izu-s
Chamalalai	di:	de:	di-ła

- Archi

(30)	ABS	ERG	DAT	OBL
'who'	k <sup>w</sup> i	ɬi-	ɬa-	—
1SG	zon	za-ri	◆-ez	za-
1PL.EX	nen	nen	◆-el	la-
1PL.IN	nen	nen+◆	◆-el-a-◆-u	la-
2SG	un	un	wa-s	wa-
2PL	ž <sup>w</sup> en	ž <sup>w</sup> en	wiš	ž <sup>w</sup> a-

- NB: Of all these weird things, only the 2pl is problematic.  
◆ = class agreement marker

- A possible solution arises if we assume that the pronouns are internally complex.
- We see a similar base emerging.

## (31) 1ST SINGULAR

ABS		z	-on
ERG		za	-ri
GEN	◆-	is	
DAT	◆-	ez	
OBL		za-	

## (32) 2ND PLURAL

ABS		ž <sup>w</sup>	-en
ERG		ž <sup>w</sup>	-en
GEN	wi-	š	
DAT	we-	ž	
OBL		ž <sup>w</sup> a-	

◆ = class agreement marker

- Nakh-Daghestanian 2pl by and large is AAA

(33)		ABS	ERG	DAT	
	Avar	muž	muže-L	muže=b=e	
	Tsez	meži	mež-a	mež-ur	
	Hinukh	meži	meži	mežu-z	
	Rutul	we	we-d	we-s	
	Tsakhur	šu	šo-sse	šo-s	
	Andi	bissil	bissi-di	bissi-j	
	Archi	ž <sup>w</sup> en	ž <sup>w</sup> en	wiš	ž <sup>w</sup> a-

- Moving to AAB patterns, we see that they come in two types.
- The first involves syncretism between cases, where there is a complete neutralization of contrast.

(34)	French		
	NOM	ACC	DAT
1:	je	me	me
2:	tu	te	te

- In French, we see that the 1st and 2nd singular is syncretic for Acc - Dative.

- German shows full syncretism in 3.SG.F and 3.PL.

(35)

	Nominative	Accusative	Dative
3.sg.m	er	ihn	ihm
3.sg.f	sie	sie	ihr
3.pl	sie	sie	ihnen

- Krongo shows full syncretism in the first three cases.

(36)

Form	Subject	Object	Dative	Ablative	Locative
1sg	àʔàŋ	àʔàŋ	àʔàŋ	nkàtí	kàtí
2sg	ùʔùŋ	ùʔùŋ	ùʔùŋ	nkòtú	kòtú
1ex	óow	óow	óow	nkòtíg	kòtíg

(37) Archi	ABS	ERG	DAT	OBL
'who'	k <sup>w</sup> i	ɬi-	ɬa-	–
1SG	zon	za-ri	◆-ez	za-
1PL.EX	nen	nen	◆-el	la-
1PL.IN	nen	nen+◆	◆-el-a-◆-u	la-
2SG	un	un	wa-s	wa-
2PL	ʒ <sup>w</sup> en	ʒ <sup>w</sup> en	weʒ	ʒ <sup>w</sup> a-

- in 2nd person and 1pl.excl pronouns lack the Erg suffix and fail to mark an Abs-Erg contrast.

Convergent evidence: Stem-alternations in nouns (case); (McFadden, 2014)

	Finnish	Icelandic	Tamil
	'person'	'man'	'tree'
NOM	ihmi-nen	mað-ur	maram
ACC	ihmi-se-n	mann-Ø	maratt-ai
PART/GEN	ihmi-s-tä	mann-s	maratt-Ø
INESS/DAT	ihmi-se-ssä	mann-i	maratt-ukku

NOM > ACC > OTHER : \*ABA, all non-nominative cases are treated alike (they share the same stem).

- The other type of AAB is where the first two cases share a form, but there is overt case marking distinguishing the two.
- In these instances, it is not possible to analyze them as AB(B).
- These represent clear AAB patterns.
- Consider the following, from Wardaman:

(38)	Form	Absolutive	Ergative	Dative/oblique
	3sg	narnaj	narnaj-(j)i	gunga
	3pl	narnaj-bulu	narnaj-bulu-yi	wurrugu

## (39) Jingulu

	NOMINATIVE	ERGATIVE	ACCUSATIVE/GEN ..
1SG	ngaya	ngaya- <b>rni</b>	ngarr-
2 SG	nyama	nyama- <b>rni</b>	nga(a)nk-

- NB. Jingulu distinguishes Erg from Acc, requiring a refinement to the Case hierarchy:

## (40) NOM &gt; ACC/ERG &gt; DAT &gt; OTHER

- Nakh-Daghestanian 2sg

(41)		ABS	ERG	DAT	
	Avar	mun	du-la	du-r	ABB
	Andi	mín	min	du-j	AAB (tone)
	Chamalal	mì:	mín	du-ła	AAB
	Inxokvar	mó	me	dub-ul	AAB
	Xinalug	vì	va	oX(ir)	AAB
	Tsez	mi	mi	deb-er	A=AB
	Hinukh	me	me	ded-ez	A=AB
	Archi	un	un	wa-s	A=AB
	Agul	wun	wun	was	A=AA

# The theoretical importance of AAB

## The Comparative Superlative Generalizations:

(42) \*ABA: \**good* – *better* – *goodest*

(43) \*AAB: \**good* – *gooder* – *best*

No apparent counterexamples to \*AAB (maybe 1).

## (44) *The Containment Hypothesis*

## (45) *\*good – gooder – best*

- a. GOOD → be(tt)- / \_\_\_ ] ... SPRL ]
- b. GOOD → good

- Whilst it is possible to formulate a rule like (45a), it is ruled out by locality.

## (44) *The Containment Hypothesis*

## (46) Locality

- Node  $\alpha$  may be conditioned by node  $\beta$  iff  $\alpha, \beta$  are local
- $\alpha, \beta$  are local if no (cyclic) node intervenes

- see (with qualifications): Embick (2010), Moskal (2013).

## (44) *The Containment Hypothesis*

## (45) \*good – gooder – best

- a. GOOD → be(tt)- / \_\_\_ ] ... SPRL ]
- b. GOOD → good

- CMPR is a cyclic node, and causes SPRL to be inaccessible to ADJ.

- If we enrich the structure a little, we can allow AAB.
- Taking case containment to be featural, rather than structural, bundles case features on the same node, and equidistant from the root.

## (47) Bundling and Containment

- Root Allomorphy conditioned by F1 ? a - yes, b - no.
- Note, only if F2 is cyclic (see Moskal in progress for discussion).

(48)

(49)

- Two views on locality:
  - STRUCTURAL - suppletion is not possible across a hierarchically intervening (cyclic) node (Bobaljik, 2012; Moskal, to appear).
  - LINEAR - suppletion is not possible across linearly intervening nodes (Embick, 2010).
- Pronouns provide some ambivalent evidence regarding a linearity condition, but the number of relevant examples is small

- *In support of linear adjacency . . .*
- In Khakass, overt number marking (pl *-lar*) between the pronominal stem and case appears to block case-driven suppletion.

(50) Khakass

	NOM	ACC	DAT
3SG	ol	ani	agaa
3PL	o-lar	o-lar-ni	o-lar-ga

- *Against linear adjacency* . . .
- But in Tamil, in a parallel configuration, overt number marking between the pronominal stem and case appears to be transparent to case-driven suppletion.

## (51) Tamil pronouns

	DIRECT	GEN/OBL	DATIVE
1SG	naan	en	en-akku
1PL.EX	naan-ga(!)	en-ga(!)	en-gaḷ-ukku
2SG	nii	on	on-akku
2PL	niin-ga(!)	on-ga(!)	on-gaḷ-ukku

⇒ Tentative conclusion: no strict linear adjacency condition on suppletion (contra Embick 2010).

- For further discussion on the role of linear adjacency in suppletion, see Moskal (in progress).

# Case suppletion: Summary

- Parallels between comparatives/superlatives and morphological case suggest that cases show containment.
- Cases to the right of the case hierarchy contain those to the left (Caha, 2009).
- $NOM > ACC/ERG > DAT/OBL$

(52)

- Suppletion in pronouns shows clearly the AAA, ABB and ABC patterns we expect (and AAB).
- But not ABA (but cf. Archi 2pl)

Pronouns

## Conclusion

Bibliography

- Number shows similar hallmarks of containment.
- The Number Hierarchy (Corbett, 2000)
- SINGULAR > PLURAL > DUAL
- No language has a trial number unless it has a dual. **No language has a dual unless it has a plural.** (Universal 34, Greenberg, 1963; Corbett, 2000)

- Number also shows containment relations in morphology.
- In Manam, PLURAL is transparently contained in the DUAL form.

(54)	áine ŋá <b>ra</b> woman that-SG 'that woman'	singular
(55)	áine ŋá <b>ra-di</b> woman that-PL 'those women'	plural
(56)	'aine ŋ <b>ara-dí-a-ru</b> woman-that-PL-LINKER-DL 'those two women'	dual

(57)

Were number to be contained in this way, we make the following predictions regarding number. In singular – plural – dual triples:

- AAA, ABB and ABC patterns are all allowed and should be seen.
- ABA patterns should not be attested.
- AAB is an open question, depending on how number is structured.

70 languages, few with 3 number values and pronominal suppletion for number.

(58)

Pattern	Prediction	Attested?	Languages
AAA	✓	✓	Mapuche, Dumi
ABB	✓	✓	Kayardild, Jingulu
ABC	✓	✓	Yimas, Kham
ABA	✗	✗	n/a
AAB	✓	✗	n/a

## Conclusion

Bibliography

- We do not find any instances of ABA patterns in number in pronouns.
- When the plural form is suppletive, so too is the dual form.

- We also looked at lexical nouns. In contrast to case, suppletion for number is well attested in lexical nouns.
- In the SG-PL-DL languages, we see little evidence; we found very few languages which make a SG-PL-DL distinction, and also show suppletion.
- Curiously, when we find it, the dual groups with singular, not plural.

(65)

Language	Singular	Plural	Dual	Gloss
Hopi	wùutit	momoyam	wùuti	'woman'
Lavukaleve	vo'vou	tulav	vo'voul	'boy'
Yimas	panmal	pay-um	panmalc-rm	'man'

- This looks like an ABA pattern!

## Conclusion

Bibliography

- However, if we assume that dual is contained within plurals in lexical nouns, these become an AAB pattern.

(66)

Language	Singular	Dual	Plural	Gloss
Hopi	wùuti	wùutit	momoyam	'woman'
Lavukaleve	vo'vou	vo'voul	tulav	'boy'
Yimas	panmal	panmalc-rm	pay-um	'man'

# Number in Lexical Nouns: More than a trick

- In Hopi, containment supports the alternative embedding; the plural is built from the dual form.
- The dual is formed by suffixation of -m or -t.
- Plural is sometimes marked with the dual suffix and partial reduplication.

(67) Hopi (SG > DU > PL)

	SG	DU	PL
'person'	sino	sino-t	sino-m
'horse'	kawayo	kawayo-t	kawayo-m
'donkey'	mooro	mooro-t	<b>moo-moro-t</b>
'child' <sup>1</sup>	tsay	tsaayo-m	<b>tsaa-tsayo-m</b>
'woman'	wùuti	wùuti-t	<b>momoyam</b>

---

<sup>1</sup> = 'young.ANIMATE'

- Dual and plural patterning together in Slovenian.

(68) Slovenian 'person' (Baerman et al., 2005)

	SG	DU	PL
NOM	človek	človek-a	ljudj-e
ACC	človek-a	človek-a	ljud-i
GEN	človek-a	<b>ljud-i</b>	<b>ljud-i</b>
DAT	človek-u	človek-oma	ljud-em
INST	človek-om	človek-oma	ljud-mi
LOC	človek-a	<b>ljud-eh</b>	<b>ljud-eh</b>

- Locative and genitive show complete syncretism for dual and plural (Corbett, 2007). They are simply plural.

## Conclusion

Bibliography

(73)

- Convergent evidence for structure:

- markedness:  
POS < CMPR < SPRL
- affix order
- plausible semantics

(74)

- weaker evidence for structure:
  - markedness:  
UNM < DEP < OBL
  - affix order (sporadic)
  - (but no semantics)

(75)

(76)

- conflicting evidence for structure:

- markedness:  
SG < PL < DU
- affix order (ambivalent)
- (conflicts with semantics)

- If we take the suppletion facts as being a diagnostic for how the structure is, then we arrive at the following structures for nouns and pronouns.

(77) Pronouns

(78) Nouns

- In pronouns, the dual is built from the plural form.
- Consider again, Kham (Sino-Tibetan)

(79)		SINGULAR	PLURAL	DUAL
	1st	ŋa:	ge:	gi-n
	2nd	ñi:	je:	ji-n
	3rd	no:	no:-rə	no:-ni

- We see the dual is formed from the plural form, with the addition of  $-n(i)$ .

- This is also the case in Lavukaleve (du = pl + /)

(80)

	SG	PL	DU
1INCL		me	me-l
1EXCL	ngai	e	e-l
2	inu	imi	imi-l

- And Hua (du = pl + a'a)

(81)

	SG	PL	DU
1	d-gai	r-gai	r-a'a-gai
2	h-gai	p-gai	p-a'a-gai
3	Ø-gai	p-gai	p-a'a-gai

- Recall that in Hopi, the reverse was shown to be the case for lexical nouns.
- Du: -m or -t
- Pl: Dual + partial reduplication

(82) But: Hopi (SG > DU > PL)

	SG	DU	PL
'person'	sino	sino-t	sino-m
'horse'	kawayo	kawayo-t	kawayo-m
'donkey'	mooro	<b>mooro-t</b>	<b>moo-moro-t</b>
'child' <sup>2</sup>	tsay	<b>tsaayo-m</b>	<b>tsaa-tsayo-m</b>
'woman'	wùuti	wùuti-t	<b>momoyam</b>

- The dual suffix is retained when there is partial reduplication to build the plural.

<sup>2</sup>= 'young.ANIMATE'

- Koryak verbal inflection also supports an analysis where the plural is built on the dual.
- plural = dual + /a

(83)

	'overtake'		'study'
	1sg>2	2/3sg>1	1 intrans
SG	tə-johə-ge	ena-joh-e	tə-ejgučew'ηə-k
DU	tə-johə-tək	na-johə-mək	məčč-ejgučew'ηə-mək
PL	tə-johə-la-tək	na-johə-la-mək	məčč-ajgočaw'ηə-la-mək

(Also in Mi'gmaq - A. Bale, p.c.)

- Tongan clitics also show the plural being built from the dual (B. Ahn p.c.).

## Conclusion

Bibliography

- Why should nouns and pronouns differ in this way?
- Two ways in which nouns and pronouns differ:
  - Semantics of plural (but see Harbour, 2007)
  - Structural difference (lexical nouns have a category defining node (Moskal, to appear amongst others))
- Neither affords an obvious solution

- dog:dogs The plural of a noun is a plurality of that noun.
- I: we The plural of [+speaker] is not a plurality of speakers.
- je : jullie The plural of [+hearer] is not (always) a plurality of hearers.
- In no language is 2PL restricted to a plurality of hearers. It can always be used for a single hearer and others unspecified (Simon, Cysouw, Bobaljik)
- Not obvious how/why this would matter for the structures in (77)

## (86) *Nominal Domains*

- The structures in (86) are supported by suppletion asymmetries between pronouns and lexical nouns.
  - 1 Pronouns show suppletion for both number and case.
  - 2 Lexical nouns show suppletion for number but *not* for case.

- The semantics of number as argued for in work by Daniel Harbour (Harbour, 2007 et seq, see also Noyer, 1992) says that SG, PL, DL result from the combination of two number features:
- $[\pm\text{singular}]$  and  $[\pm\text{augmented}]$ .

(87)

(88)

	SG	AUG
singular	+	-
dual	-	-
plural	-	+

## 4 Conclusion

# Suppletion is a structure detector

(90)

(91)

- If Y contains X (contains unmarked), then \*ABA

- The attested and unattested patterns seen in case suppletion show that pronouns have internal structure.
- Case is internally complex.
- Unmarked cases are contained within dependent cases.
- Oblique cases contain both unmarked and dependent cases.
- (AAB) feature-containment, not structural.
- There seems to be no (universal) condition on adjacency in suppletion.

(92)

(93)

- AAB patterns: Either DEP is not cyclic, or cases are contained featurally (structure on right).
- Further worked required to establish the correct one.

- We also find clear patterns in number suppletion.
- With pronouns, once the plural form is suppletive, so to is the dual form.
- This seems to support a structure where DL is outside of PL.
- Containment morphology further supports this in pronouns (the dual form contains the plural, but not vice versa).

(94)

- In lexical nouns, the opposite patterns are found.
- The instances we have found show that if the plural is suppletive, the dual form is not.
- Rather than this being an ABA pattern, we argue that this ought to be seen as AAB.
- In lexical nouns, the plural contains the dual, not vice versa.
- Containment morphology supports this. The formation of lexical nouns (among others) sees plurals built on top of duals (c.f. Hopi).

(95)

- It is potentially possible to capture the attested suppletion patterns with a conventional feature representation for number (cf. Harbour, 2007).
- On such an approach, plural and dual are grouped together with [-singular].
- Dual and singular are grouped together with [-augmented].
- However, it is not clear why lexical nouns and pronouns pattern differently.
